THE
**CYBER
RESILIENCE
CENTRE
NETWORK**

Improving
Cyber Resilience
— together

Why should **BUSINESSES SIGN UP?**

There is a police-led, not for profit Cyber Resilience Centre in every region in England and Wales (outside of London which is planned for later in 2021) to help businesses better protect themselves against cyber threats.

Each CRC offers flexible membership packages to suit the needs of all businesses with the Core Membership being **free of charge**.

Visit your local centre's website to discover the full range of available cyber security services.

BOOST *your* **CYBER RESILIENCE**

The CRC's work with students from the top universities nurturing the brightest and best cyber talent to develop a student talent pipeline. The students are mentored and supported to engage with business to deliver affordable cyber security services from Security Awareness Training to Vulnerability Assessments.

The objectives are to build this talent pipeline and direct this back into policing for the benefit of law enforcement and business so the students will be career ready with strong cyber security skillsets in business and policing.

As a CRC member, you will also receive:

WELCOME PACK

An easily digestible welcome pack to help you understand how the **CRC** can work with your business to develop its resilience to cyber-attacks.

TIPS & TRICKS

A monthly newsletter full of tips and tricks to help you navigate cyber security basics.

RESOURCES

Access to regular downloadable resources and guidance from law enforcement, the National Cyber Security Centre and other partners.

SKILLED

We provide a range of services delivered by top talent from local universities, including security awareness training for employees.

TRUSTED

Exclusive access to a network of Trusted Partners who can help you complete the Government-backed Cyber Essentials programme – designed to protect businesses **from up to 80%** of the most common cyber-attacks.

“ Just a short note to say a massive thank you following a great training session to our staff this week. I have to say, mostly they find IT deadly boring and probably groaned when they saw my email to book into the training session! However, we got some really positive feedback and they all stayed engaged right to the end.

I definitely think they all went away feeling much more in control and better placed to identify security risks, for the work and their personal IT security at home – which is really important now that more of them are working remotely too.

— Feedback from Security Awareness Training, delivered to a charity in the South East

— Helping your business monitor *and* report the malicious activity you face from the internet

What is POLICE CYBERALARM?

Police CyberAlarm is a **free tool** to help your business understand and monitor malicious cyber activity.

Police CyberAlarm acts as a “CCTV camera” monitoring the traffic seen by your businesses’ connection to the internet. It will detect and provide regular reports of suspected malicious activity, enabling your business to minimise your vulnerabilities.

Once you become a Police CyberAlarm member you install a ‘CyberAlarm Virtual Server’ on your system which will be used to collect and process traffic logs identifying suspicious activity from your firewall/internet gateway.

Police CyberAlarm is a monitoring system and does not interfere with normal network operations. It is a small virtual appliance outside the network and does not delay the traffic through the gateway and is installed with just one-click.

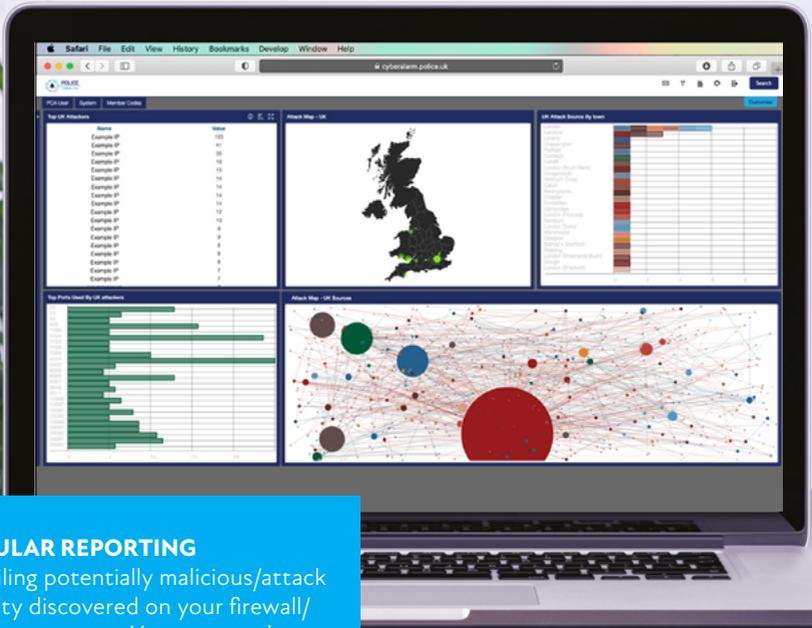

Where DO I SIGN UP?

If you would like to become part of Police CyberAlarm or find out more about receiving regular security updates and reports to help you gain a better understanding of current threats, register on our website:

cyberalarm.police.uk/#join

DOES IT COLLECT *any* DATA?

The system only collects the data you agree to provide, and does not include any content of the traffic. The system is designed to protect personal data, trade secrets and intellectual property.

REGULAR REPORTING

Detailing potentially malicious/attack activity discovered on your firewall/internet gateway. You can use these reports for further investigation and to better protect your business.

IDENTIFY YOUR BUSINESS VULNERABILITIES

Scan your businesses website and external IP addresses for known vulnerabilities. These regular reports can help you protect your business from known suspicious activity.

BUSINESS INFORMATION AND INTELLIGENCE

Data is used to provide details on the latest threats discovered, giving your business the ability to update security measures.

HELPING THE POLICE HELP YOU

Data is also used by the police to identify current threats, take enforcement action against the cyber criminals and help your business prepare and better protect itself.

“ The report we receive from the Police CyberAlarm has been invaluable, not only are we able to block IP’s attempting malicious attacks, it also helps inform our Board of Directors of the scale of the problem in a non-technical way. This ensures that resources within the business can be directed proportionately and appropriately.

— Nicola Petts, Group IT, IG,
Vendor Manager at Christchurch Group

CYBER GRIFFIN

Supporting businesses in the square mile to *protect* themselves from cyber crime

What is **CYBER GRIFFIN?**

Cyber Griffin is a City of London Police initiative that supports businesses and individuals with a footprint in the Square Mile to protect themselves from cyber crime.

Our 4 core services are **free of charge** and provide non-technical, independent advice that focuses on the human element of security. They are designed to be accessible to everyone, whether they have very little knowledge of cyber crime, or are individuals who hold IT security and risk management roles.

Cyber Griffin services are regularly updated using industry cyber security threat reports as well as information from the National Cyber Security Centre (NCSC), Action Fraud and Police databases to ensure our services are up to date.

Tailored to **ASSIST YOU**

We are an independent, vendor agnostic service, with direct access to police and Action Fraud databases. Our intelligence-led services are continually updated to reflect the most relevant and prevalent threats to your business.

Whether you are a small medium enterprise, or a large corporation, we have a range of services tailored to assist you.

Why choose **US?**

All Cyber Griffin officers are NCSC certified trainers and as part of the City of London Police, the national policing lead for Economic Crime, we are uniquely placed to meet your training requirements.

You can utilise our specialist knowledge and expertise to support your cyber security programme.

Our trusted and neutral position ensures that our input is solely focused on reducing the likelihood and the impact of cyber attacks in order to protect your business.

Protect your business from the threat of cyber crime today:

- + Book one of our cyber security training services
- + Find out more about tailoring our training to your needs
- + Invite Cyber Griffin to speak at your event

Certified Training

in association with

National Cyber Security Centre

 cybergriffin.police.uk cyber.griffin@cityoflondonpolice.uk

BASELINE BRIEFING

Whether you have only just begun your security culture journey, or whether your security culture is mature and well-established, our baseline briefing is the perfect way to introduce your staff to the threats and prevention tactics that will help to secure your organisation against cyber attacks.

TABLE TOP EXERCISE

Our award-winning Table Top Exercise tests people's response to a range of cyber attacks as well as physical security threats and is the ideal way to highlight how security decisions can impact your business.

INCIDENT RESPONSE TRAINING

Our officers give first-hand insight into the tried and tested incident response models and methods used today by UK Policing. Whether you have an existing incident response plan, or are in the process of developing one, this session will help you plan and prepare effectively for when it is needed.

CYBER CAPABILITY ASSESSMENT

Utilising the Cyber Defence Capability Assessment Tool (CDCAT®) tool originally developed by the Ministry of Defence's Defence Science and Technology Laboratory, we are able to assess your organisation's current cyber defences and controls and highlight any vulnerabilities.

“ About 80% of the cyber crime reported in the City of London is from businesses, so it's important that we work together to ensure there are fewer victims of cyber crime offences in the future. Cyber Griffin is about making sure people at all levels of an organisation have access to the best advice in order to protect themselves, and the business they work for.

— Ian Dyson,
City of London Police Commissioner
